Title: Perfect score: Sequence: US-08-212-185-12 770

1 MAQWNQLQQLDTRYLKQLHQ.....QFESLTFDMDLTSECATSPM 770

Scoring table:

OLIGO Gapop 60.0 , Gapext 60.0

Searched: 100059 seqs, 36664827 residues

Word size : 0

Total number of hits satisfying chosen parameters: 100059

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Listing first 45 summaries

Database : SwissProt_39:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PTM: TYROSINE PHOSPHORYLATED IN RESPONSE TO IL-6, IL-11, CNTF, LIF, CSF-1, EGF, PDGF, IFN-ALPHA AND OSM. SERINE PHOSPHORYLATION IS IMPORTANT FOR THE FORMATION OF STABLE DNA-BINDING STAT3

HOMODINERS AND MAXIMAL TRANSCRIPTIONAL ACTIVITY (BY SIMILARITY).

SIMILARITY: BELONGS TO THE STAT FAMILY OF TRANSCRIPTION FACTORS.

SIMILARITY: CONTAINS 1 SH2 DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FUNCTION: TRANSCRIPTION FACTOR THAT BINDS TO THE INTERLEUKIN-6 (IL-6) RESPONSIVE ELEMENTS IDENTIFIED IN THE PROMOTERS OF VARIC ACUTE-PHASE PROTEIN GENES. STAT3B INTERACTS WITH THE N-TERMINAL PART OF C-JUN TO ACTIVATE SUCH PROMOTERS IN A COOPERATIVE WAY. PATHWAY: INVOLVED IN THE GP130 MEDIATED SIGNALING PATHWAY. SUBUNIT: FORMS A HOMOLINER OR A HETERODIMER WITH A RELATED FAMI MEMBER (AT LEAST STAT1) (BY SIMILARITY).

SUBCELLULAR LOCATION: NUCLEAR: TRANSLOCATED INTO THE NUCLEUS IN RESPONSE TO PHOSPHORYLATION.

RESPONSE TO PHOSPHORYLATED IN RESPONSE TO IL-6, IL-11, CNTF, PTM: TYROSINE PHOSPHORYLATED IN RESPONSE TO IL-6, IL-11, CNTF, LIF, CSF-1, EGF, PDGF, IFN-ALPHA AND OSM. SERINE PHOSPHORYLATION IS IMPORTANT FOR THE FORMATION OF STABLE DNA-BINDING STAT3 HOMODIMERS AND MAXIMAL TRANSCRIPTIONAL ACTIVITY (BY SIMILARITY).

SIMILARITY: BELONGS TO THE STAT FAMILY OF TRANSCRIPTION FACTORS.

SIMILARITY: CONTAINS 1 SH2 DOMAIN.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SUBCELLULAR LOCATION: NUCLEAR; TRANSLOCATED INTO THE NUCLEUS RESPONSE TO PHOSPHORYLATION.
ALTERNATIVE PRODUCTS: 2 ISOFORMS; ALPHA/P91 (SHOWN HERE) AND BETA/P84; ARE PRODUCED BY ALTERNATIVE SPLICING.
PTM: TYROSINE PHOSPHORYLATED IN RESPONSE TO IFN-GAMMA, IFN-AL PDGF, AND EGF. SERINE PHOSPHORYLATION IS ALSO REQUIRED FOR MATRANSCRIPTIONAL ACTIVITY (LACKING IN BETA FORM).
SIMILARITY: BELONGS TO THE STAT FAMILY OF TRANSCRIPTION FACTOSIMILARITY: CONTAINS 1 SH2 DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PATHWAY: IFN-SIGNALLING PATHWAY:

RI SUDMITTED (MAY-1997) to the EMBL/GenBank/DDBJ databases.

C. I-FUNCTION: TRANSCRIPTION FACTOR THAT BINDS TO THE IFN-STIMULATED CERSPONSE ELEMENT (ISRE) AND TO THE GAS ELEMENT. THIS MULTIPROTEIN TRANSCRIPTION FACTOR IS TERMED ISG3 (BY SIMILARITY).

C. I-SUBUNIT: IN RESPONSE TO IFN ALPHA/BETA, THREE SUBUNITS (STAT1-BETA, STAT2) OF ISG53, BECOME PHOSPHORYLATED ON TYROSINE, MIGRATE INTO THE NUCLEUS, AND ASSEMBLE INTO A COMPLEX CONTROLLY BINDS TO THE IFN-STIMULATED RESPONSE ELEMENT (BY SIMILARITY).

C. I-SUBCELLULAR LOCATION: NUCLEAR; TRANSLOCATED INTO THE NUCLEUS IN SUBCELLULAR LOCATION: NUCLEAR; TRANSLOCATED INTO THE NUCLEUS IN SUBCELLULAR LOCATION: NUCLEAR; TRANSLOCATED INTO THE NUCLEUS IN SUBCELLULAR INTO THE STATIANTY).

C. I-PTM: TYROSINE PHOSPHORYLATED IN RESPONSE TO IFN-ALPHA (BY SIMILARITY): BELONGS TO THE STAT FAMILY OF TRANSCRIPTION FACTORS.

C. I-SIMILARITY: CONTAINS 1 SH2 DOMAIN.

RY "Identification of alternative splicing form of Stat2.";

REBS Lett. 381:191-194(1996).

C "IDENTIFICATION FACTOR THAT BINDS TO THE IFN-STIMULATED RESPONSE ELEMENT (ISRE) AND TO THE GAS ELEMENT. THIS MULTIPROTEIN TRANSCRIPTION FACTOR IS TERMED ISGF3.

C "IDENUAL": IN RESPONSE TO IFN ALPHA, BETA, THREE SUBUNITS (STAT1-C).

C ALPHA, STAT1-BETA, STAT2) OF ISGF3, BECOME PHOSPHORYLATED ON TYROSINE, MIGRATE INTO THE NUCLEUS, AND ASSEMBLE INTO A COMPLEX CONTROLORY.

C TOGETHER WITH ISGF3 GAMMA (P48), A DAN-BINDING PROFEIN THAT SPECIFICALLY BINDS TO THE IFN-STIMULATED RESPONSE ELEMENT (BY SIMILARITY).

C SIMILARITY).

C SIMILARIONE TO PHOSPHORYLATION (BY SIMILARITY).

C PRODUCED BY ALTERNATIVE SPLICING.

PRODUCED BY ALTERNATIVE SPLICING.

C ILTERN, KIDNEY, MUSCLE, AND THE BRAIN, LUNG, HEART, SPLEEN, LIVER, KIDNEY, MUSCLE, AND THE TESTIS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ballew R
                                                                                                                                                                                             s SWISS-PROT entry is copyright. It is produced through a collaboration ween the Swiss Institute of Bioinformatics and the EMBL outstation - European Bioinformatics Institute. There are no restrictions on its by non-profit institutions as long as its content is in no way
                                                                                                                                                                                                                                                                                                                                                                                                                                 PUPAL, AND ADULT STAGES, WITH SOME DECREASE IN THE LATE EMBRYONIC STAGES. THE EXPRESSION IS UNIFORM IN UNFERTILIZED OR JUST FERTILIZED EGGS, SUGGESTING MATERNALLY DEPOSITED MRNA. AT BLASTODERM STAGE, EXPRESSION PATTERN SHOWS STRIPES, THAT ARE REMINISCENT OF MANY PAIR RULE GENES PATTERN.

PTM: TYROSINE PHOSPHORYLATED BY HOPSCOTCH. PHOSPHORYLATION IS
                                                                                                                                                                                                                                                                                                                               REQUIRED FOR DNA-BINDING ACTIVITY AND DIMERIZATION.
SIMILARITY: BELONGS TO THE STAT FAMILY OF TRANSCRIPTION FACTORS
IN PARTICULAR TO MAMMALIAN STATS AND STAT6.
SIMILARITY: CONTAINS 1 SH2 DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEMBER.
SUBCELLULAR LOCATION: NUCLEAR; TRANSLOCATED INTO THE NUCLEUS IN RESPONSE TO PHOSPHORYLATION (BY SIMILARITY).
ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND
